All management plans should: improve and emphasize control of noxious weeds and invasive species; allow for harvest and thinning of beetle-killed, dying or infected trees (support thinning over controlled burns); management and enforcement of travel plan needs to be emphasized.	Lemhi: For Southwestern part is adjacent to road over Morgan Crk summit, the single major access route to the southern end of the Panther Creek drainage. This area's current prescription is 2A, although construction of firebreaks in the area would result in great benefits. Topography and vegetation southwest of Opal Creek lends itself to active timber management. Recommend that the portion of this roadless area from Morgan Creek road to Opal Creek be changed to 5C.
